

ATO Remote Control

The ATO Remote Control is a tablet-based system designed to provide precise and intuitive management of ATO ultrasonic metal atomizers. It allows users to control atomizer functions in real time, including adjusting parameters such as frequency and feed rates. Its streamlined interface allows operators to easily monitor the atomization process, ensuring consistent, high-quality powder production without manual intervention.

In addition to controlling atomizer functions, the ATO Remote Control enables users to optimize their workflow by focusing on other tasks while the atomizer operates autonomously. The ability to manage multiple atomizers from a single device further supports scalable powder production, making it an ideal tool for laboratories and production environments looking to increase efficiency and output.

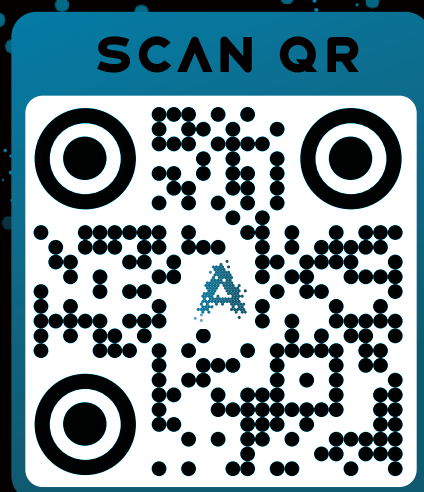

KEY FEATURES

- Real-time control for precise atomizer operations
- Effortless remote adjustment of atomization parameters
- Manage multiple atomizers for scalable production
- Supports multitasking during automatic atomization
- Compact and portable for easy integration in any setup
